

Location List API v1

<https://uat1api.speedybooker.com/locationlist.aspx>

About this API

A “location” is a predefined geographical area at the town, city or county level – for example Bath, Greater London, Isle Of Wight. We define these locations and create new ones from time to time. Vendors can be in one or more location (i.e. Oxford and Oxfordshire).

This API allows you to get a list of all the locations we have on our system, optionally filtered by country.

The result is generated in real time and is not cached on our server. If you are hitting the API regularly, please consider caching it at your end.

Request format

The request is made as an HTTP GET with the following parameters:

Name	Requirement	Description	Type
partnerid	Required	The partner ID which we will supply to you	Integer
apikey	Required	The API Key which we will supply to you	String
countryid	Optional	The ISO 3166-1 alpha-2 code for the country you want to get locations for. For example GB or ES.	String

Example request for all locations:

uat1api.speedybooker.com/locationlist.aspx?partnerid=123&apikey=abcdef

Example request for locations in the UK:

uat1api.speedybooker.com/locationlist.aspx?partnerid=123&apikey=abcdef&countryid=GB

Response

An XML document is returned with the following elements:

Name	Description	Attributes	Type
locationlist	Document root node		Container
status			Container
code	The status code – see below		Integer
message	Details for the status code if applicable		String
location		id: The ID of the location (Integer)	Container
name	The name of the location		String
numvendors	The number of vendors in your partner account in this location		Integer
countryid	The ISO 3166-1 alpha-2 code for the country the location is in		String
summary	A brief summary of the location, maximum length 250 characters		String
photourl	The URL of the thumbnail photo for the location hosted by us		URL
lat	The latitude of the approximate centre of the location		Decimal
lng	The longitude of the approximate centre of the location		Decimal
zoomlevel	Our recommended map zoom level in order to display this location in full on a map, based on the zoom levels used by Google Maps		Integer
